BEFORE YOU REDESIGN

A new website can lose what Google already knows.

Five checks that keep your rankings through a redesign.

1 STEP 1 OF 5

List every page Google sends visitors to.

Search Console’s Pages report shows them. Those are the pages you cannot afford to lose.

2 STEP 2 OF 5

Redirect every old address.

A permanent redirect sends visitors and Google from each old page to its new one. Without it, the old page becomes an error.

3 STEP 3 OF 5

Keep the words that rank.

If a page title already matches what buyers search, keep those words in the new title.

4 STEP 4 OF 5

Remove the test settings.

Check for noindex tags and robots.txt blocks left over from the build, before you launch.

5 STEP 5 OF 5

Watch Search Console for four weeks.

Submit the new sitemap, and check the Pages report each week for errors.

FREE, IN UNDER A MINUTE

See where your site stands.

Our free check shows what Google and AI tools see on your website, in under a minute.
